

# ZIP-UP "PEEL & STICK" TWIN ZIPPER DOORS ARE QUICK & EASY TO INSTALL.

**BEFORE STARTING: DO NOT** cut the doorway opening until the ZIP-UP zipper is adhered to the poly sheeting. The ZIP-UP zipper should be positioned so that the zipper is pulled UP to open and DOWN to close.

1) Turn the zipper over so that the white adhesive back is showing. With the zipper closed (the zipper slider should be at the opposite end of where you will begin to peel), peel back the two outside paper liners, then the center paper liner to expose about 6-inches of the blue adhesive back.

2) Position the top of the zipper to the poly sheeting 7-feet up from the bottom of the poly sheeting and firmly press the exposed blue sticky portion of the ZIP-UP zipper to the poly sheet. Slowly pull the paper liners down while pressing the zipper to the poly sheeting as you go.

3) Apply the end tabs to the top and bottom end of the zipper, half on the zipper and half onto the poly sheeting.

4) Unzip and OPEN the ZIP-UP zipper all the way UP to the top.

5) Using any razor knife, cut through both the blue zipper and the poly sheeting. Cut between the zipper teeth. Cut down the entire length of the zipper, being careful not to cut into the zipper teeth. If you are using only one zipper for a single entrance, stop cutting when you reach the bottom end piece. If you are using both zippers for a wider entrance, cut through the bottom end piece to the end of the poly sheeting.

6) Using both hands—one hand held against the back of the poly sheeting for support and one hand pressing the blue zipper, firmly press the zipper against the poly sheeting from top to bottom to permanently adhere.

Apply the two zippers at any width you choose. This allows the ZIP-UP "Peel & Stick" Twin Zipper Door to be rolled-up and down creating a wide entrance and exit containment barrier for dust and debris. By placing the zippers even wider apart, the Twin Zipper Door is very convenient for moving large equipment and materials in and out of sealed areas. The Twin Zipper Door is great for construction, abatement, remediation, painting, sanding, and other jobsite projects where containment is required.
