# POLY CLAMPS

## INSTRUCTIONS

1. Separate male and female parts.

2. Clip open end of male part to T-bar. Repeat this step every 2 feet or desired distance.

3. Lay out poly sheet. Starting at one end and at least 2" from edge of the poly, pierce the poly through the pointed end of the male part.

4. While holding poly in place slip the female part onto the male part then lock the lever into place, clamping poly tight to ceiling. Repeat this step until your poly wall is complete.

5. To remove: Push lever out of its locking position and detach female part from male part. Release poly sheet and then remove male part from T-bar.
